

What AI Can Actually Do for Your Local Business

A plain list of practical uses — no jargon, no hype.

Most AI advice is written for companies with a tech department. This is the version for a business with a handful of people and no time to evaluate software. Everything below is something a small business can actually put to work — usually starting with one task.

Customer & sales

- Instant lead response and follow-up
- Appointment booking and reminders
- Review requests and reply drafting
- A simple chatbot for the questions you answer twenty times a week
- Personalized email and text sequences

Operations & admin

- Invoice and receipt processing
- Expense categorization
- Meeting notes and action-item extraction
- Document summarization
- Data entry between the apps you already use — CRM, spreadsheets, email

Marketing & visibility

- Google Business Profile posts and updates
- Social media content drafts
- Local SEO pages and FAQ writing
- Ad copy variations
- Monthly performance summaries

Custom tools & agents

- Simple internal dashboards
- Custom scripts and automations
- AI agents that handle a recurring task start to finish
- Website forms and landing pages
- Order and request intake systems

Business ecosystem

A connected system where your own lightweight agents hand work to each other — lead → follow-up → booking → review → reporting.

Managed monthly instead of rebuilt as one-off projects.

PROCESS How a build works

01

Specify

Describe the task you keep repeating, the apps involved, and what a good result looks like.

02

Quote

You receive a clear price and timeline before any work starts.

03

Build

The tool is built for your workflow, handed over working, and adjusted until it fits.

MONTHLY What it costs

STARTER

\$300 / month

Core automations for one part of the business — usually lead response and follow-up — with light monthly support.

GROWTH · MOST CHOSEN

\$700 / month

Several agents working together across sales, admin, and marketing, tuned every month as the business shifts.

FULL CUSTOM

\$1,250 / month

A system designed end to end around your exact workflow, with ongoing development and priority turnaround.

Too small for a monthly system? Start with one.

One task, one time **from \$75**

Pick the single thing you keep doing by hand. Built, handed over, yours. No monthly anything.

Essentials **\$150 / month**

One system running — usually missed-call capture — kept working and adjusted as you go.

Setup: \$250–\$500 one time on monthly plans, quoted before anything is built. Month to month — no contract, no seat counts. You approve the price and the timeline first, every time. **Not included:** websites, SEO, social media posting, or branding — those are quoted separately.

Why not the usual options

- ✓ **You own it.** Built in your accounts, on your tools. If we stop, it keeps running.
- ✓ Nothing is a template with your logo on it — it is built for how your business actually runs.
- ✓ Built one at a time, so I work with 4–6 businesses at once.
- ✓ No per-seat pricing and no platform to migrate onto.
- ✓ Built here in Cullman. You can call the person who wrote it.
- ✓ Start anywhere on this list and move when it makes sense.

Questions people ask first

Who owns it when we're done?

You do. It is built in your accounts, on your tools, under your logins. Nothing is hosted on a platform you have to rent from me.

Do I have to change software?

No. The point is to connect what you already use. If you run your business on a phone and a spreadsheet, that is what it is built around.

What happens if I stop paying?

Thirty days' notice and we're done. What is already built keeps running — I am not holding the switch.

How long before it is working?

A single task is usually a few days. A full monthly system is typically live inside two weeks, and you approve the plan before it starts.

Start with one task.

Tell me something you keep doing by hand. You will get a price and a timeline before anything is built.
